

Our Approach to Environmental Sustainability

Bromford Group is a sector-leading housing provider with a national reputation. We want to use our position of influence to show how we can reduce the impact of our neighbourhoods, homes, services and business practices on the environment, and create environmentally sustainable homes that meet the needs of the present without compromising the ability of future generations to meet their own needs. Our commitments are set out as part of the ‘Greener Bromford’ plan.

Bromford
Group

Land Use

Our new developments are carefully planned and designed, generally using modern methods of construction and buildings with a low environmental impact.

We create sustainable landscapes and green spaces around homes so that wildlife is protected and encouraged. On our existing estates, we listen to the voice of our customers to inform investment decisions and create neighbourhoods and environments where people really want to stay.

Waste

We will minimise waste and promote recycling by developing recycling practice in the construction of new developments and in our repairs services.

Our partners, contractors and consultants have an important role to play and we expect them to share our commitments and work with us to achieve our ambitions through local strategic partnerships. We also support our partners to achieve their objectives as part of the Sustainable Communities agenda.

Existing Buildings and Transport

Bromford Group is a major employer across central England which provides a great place to work and we consider the environmental impact of what we do.

We reduce our carbon footprint by decreasing energy consumption, creating energy plans for our offices.

By the use of modern technology, we reduce the need to travel, and promote sustainable transport to work and between places of work.

We continue to invest in our homes, providing improvements that increase energy efficiency and reduce running costs so that our customers can enjoy affordable warmth.
